

# AI Transformation Value Dashboard

Executive view of adoption, value realization, readiness and responsible scale

A senior-leader view of adoption, value, and organizational readiness for responsible AI in a law firm

### Executive premise

AI transformation becomes durable when leaders can connect adoption activity to matter-level value, workforce readiness, knowledge reuse, and responsible-use controls. This dashboard turns those signals into a practical management cadence: not a vanity report.

#### THE LEADERSHIP QUESTION

Where is AI changing how work gets done: and what intervention will accelerate safe, useful adoption?

#### THE OPERATING RESPONSE

Pair quantitative signals with stakeholder feedback, then target communications, training, office hours, and workflow support by practice and persona.

## What the dashboard measures

| Signal            | Executive interpretation                                                 | Management action                                        |
|-------------------|--------------------------------------------------------------------------|----------------------------------------------------------|
| Capacity released | Estimated hours redirected from repeatable work to higher-value activity | Validate assumptions; prioritize scalable workflows      |
| Adoption quality  | Active, repeat, and role-relevant use: not logins alone                  | Segment communications and learning by persona           |
| Workflow scale    | Use cases progressing from pilot to governed production                  | Remove process, data, and ownership bottlenecks          |
| Knowledge reuse   | Approved assets reused across teams and matters                          | Strengthen curation, findability, and contribution loops |

Design principle: Every metric should lead to a decision. Report trends by practice, role, and workflow; pair them with qualitative feedback; and clearly distinguish observed activity from estimated value.

### Transformation Lens:

| VALUE          | ADOPTION              | GOVERNANCE   | SCALE              |
|----------------|-----------------------|--------------|--------------------|
| Hours released | Role-based enablement | Human review | Pilot → production |
