

Contract Risk Intelligence

An AI-enabled review workflow for faster, more consistent contract triage

PORTFOLIO SAMPLE	Executive premise
PORTFOLIO SAMPLE Senior Manager — AI Transformation	Executive premise Turn unstructured agreements into prioritized legal insight while preserving lawyer judgment, confidentiality, and a defensible review trail.

Executive Summary

Contract review is often slowed by manual issue-spotting, inconsistent playbook application, and limited visibility into risk across a matter portfolio. This concept demonstrates how a governed AI workflow can surface priority clauses, explain the basis for a risk signal, and propose playbook-aligned language—so legal teams can focus their time where judgment matters most.

Business Value

ACCELERATE	STANDARDIZE	CONTROL
Prioritize high-impact provisions and reduce first-pass review effort.	Apply approved risk criteria and fallback language consistently.	Keep recommendations explainable, reviewable, and subject to lawyer approval.

Transformation Lens:

VALUE	ADOPTION	GOVERNANCE	SCALE
Hours released	Role-based enablement	Human review	Pilot → production

Product Experience

Contract Risk Intelligence	
Secure document intake • Clause extraction • Review-ready output	
Detected Clauses Limitation of liability Indemnification Data use and confidentiality	Clause Analysis HIGH RISK — Limitation of liability The clause departs from the approved position by excluding categories of loss without a corresponding cap. Recommended position Present approved fallback language with source attribution and required reviewer approval.

Designed for Responsible Adoption

- **Human-in-the-loop:** AI outputs are recommendations, not legal conclusions.
- **Traceability:** Every risk signal links to the source clause, playbook rule, and reviewer action.
- **Confidentiality by design:** Access, retention, and model-use controls align to client and matter requirements.
- **Measured rollout:** Pilot with a bounded agreement type, validate quality, then scale through reusable patterns.

Transformation Leadership Approach

1. Frame	2. Validate	3. Govern	4. Scale
----------	-------------	-----------	----------

Define the user, decision, risk, and measurable outcome.	Test data, workflow fit, and quality with practitioners.	Establish controls, accountability, and escalation paths.	Operationalize adoption, measurement, and reuse.
